Team Name-Armadroid

Team members-(All team members are from 3rd year IT)

- Satyam Kumar Gupta(20158047)
- Aman Shroff(20156026)
- Divyanshu Kapoor(20158100)
- Problem Statement –Campus Recruitment App

Features:-

1. We have a remote server database which stores the data of the student who have registered through the Application. So whenever someone want to view his /her profile he can do so using the app , the app fetches the individuals details after authenticating him/her.
2. This password is stored in encrypted form in the database so if a person who is not supposed to view the details of the student gets a peek at the database in open state he won't be able to figure out the actual password of the students.
3. We have allowed the user to enter all his details, and once he is sure that all details are correct , he could confirm for the same and the details would be locked from further modification. Though he would we allowed to update his profile picture (limited max size) and resume whenever he wishes to.
4. Along with the Campus Recruitment android App, we have also made an admin App to manage the database without actually going to the remote Database.

5. Using the Admin app , we verify the registered students , view their details of the students and add detail of the upcoming companies on the database from where the recruitment application fetches this data and notifies the student about the upcoming companies which are "Open for Registration" , the stipend they are giving , etc and also close the state of the company query in the database from "Open for Registration" to "Closed " state .
6. If an individual gets an intern, the admin could use the Application to update this very detail to the individual's records.
7. In the Recruitment App, we have used the MPAndroid horizontal barChart to show the stats of the current placement session.
8. Each time the user logs in through his account , he will get a notification denoting the deadlines of the companies "Open for Registration".
9. Students can share their interview experience and also view the experience of other students.
